

Dear all

Notes attached from Group 1 and Group 2 meetings on 25<sup>th</sup> April. Please feed through any comments. I had hoped to get these out to you earlier to consider before tomorrow's meeting.

Topics for discussion in tomorrow's meeting;

Group 1;

1. Consider a range of farm types from all habitat to all improved ground to explore PG delivery potential at different scales. What land could / should be focused on?
2. Further consideration of timescales to explore PG delivery over the long term.

Group 2;

3. Further to the conversation about soil management that we started last week - where soil related regulation exists generally only covers maintenance / further erosion. We need to improve / build soil stocks to support aspirations for future productive capacity, water quality improvement and carbon sequestration – what ideas can we generate for building, monitoring and measuring change etc?

Also attached is an additional paper on food production and public goods that we have referred to previously. There is no new information in here, but based on feedback from previous discussions it may help clarify a few issues.

Food production Environment and  
and public goods... Rural Affairs...

See you tomorrow hopefully. Thank you to those who have already sent apologies in advance.

Thanks

Welsh Government official
