Use of guidance

The approved documents

The Building Regulations 2010 (SI 2010/2214), which come into operation on 1 October 2010, replace the Building Regulations 2000 (SI 2000) and consolidate all subsequent revisions to those regulations. This document is one of a series that has been approved and issued by the Secretary of State for the purpose of providing practical guidance with respect to the requirements of Schedule 1 to and Regulation 7 of the Building Regulations 2010 for England and Wales.

At the back of this document is a list of all the documents that have been approved and issued by the Secretary of State for this purpose.

Approved Documents are intended to provide guidance for some of the more common building situations. However, there may well be alternative ways of achieving compliance with the requirements. **Thus there is no obligation to adopt any particular solution contained in an Approved Document if you prefer to meet the relevant requirement in some other way.**

Other requirements

The guidance contained in an Approved Document relates only to the particular requirements of the Regulations which the document addresses. The building work will also have to comply with the requirements of any other relevant paragraphs in Schedule 1 to the Regulations.

There are Approved Documents which give guidance on each of the Parts of Schedule 1 and on Regulation 7.

Limitation on requirements

In accordance with Regulation 8, the requirements in Parts A to K and N of Schedule 1 to the Building Regulations do not require anything to be done except for the purpose of securing reasonable standards of health and safety for persons in or about buildings (and any others who may be affected by buildings or matters connected with buildings).

Materials and workmanship

Any building work which is subject to the requirements imposed by Schedule 1 to the Building Regulations shall be carried out in accordance with regulation 7. Guidance on meeting these requirements on materials and workmanship is contained in Approved Document 7.

Building Regulations are made for specific purposes, primarily the health and safety, welfare and convenience of people and for energy conservation. Standards and other technical specifications may provide relevant guidance to the extent that they relate to these considerations. However, they may also address other aspects of performance or matters which, although they relate to health and safety etc., are not covered by the Building Regulations.

When an Approved Document makes reference to a named standard, the relevant version of the standard to which it refers is the one listed at the end of the publication. However, if this version has been revised or updated by the issuing standards body, the new version may be used as a source of guidance provided it continues to address the relevant requirements of the Regulations.

The Workplace (Health, Safety And Welfare) Regulations 1992

The Workplace (Health, Safety and Welfare) Regulations 1992 contain some requirements which affect building design. The main requirements are now covered by the Building Regulations, but for further information see: Workplace health, safety and welfare, The Workplace (Health, Safety and Welfare) Regulations 1992, Approved Code of Practice and Guidance; The Health and Safety Commission, L24; Published by HMSO 1992; ISBN 0 11886 333 9.

The Workplace (Health, Safety and Welfare) Regulations 1992 apply to the common parts of flats and similar buildings if people such as cleaners and caretakers are employed to work in these common parts. Where the requirements of the Building Regulations that are covered by this Part do not apply to dwellings, the provisions may still be required in the situations described above in order to satisfy the Workplace Regulations.

Mixed use development

In mixed use developments part of a building may be used as a dwelling while another part has a non-domestic use. In such cases, if the requirements of this Part of the Regulations for dwellings and non-domestic use differ, the requirements for non-domestic use should apply in any shared parts of the building.

Protection against impact and manifestations of glazing: The Requirements N1 and N2

This Approved Document deals with the following Requirement from Part N of Schedule 1 to the Building Regulations 2010.

Requirement	Limits on application
<p>Protection against impact</p> <p>N1. Glazing, with which people are likely to come into contact whilst moving in or about the building, shall:</p> <p>(a) if broken on impact, break in a way which is unlikely to cause injury; or</p> <p>(b) resist impact without breaking; or</p> <p>(c) be shielded or protected from impact.</p>	
<p>Manifestation of glazing</p> <p>N2. Transparent glazing, with which people are likely to come into contact while moving in or about the building, shall incorporate features which make it apparent.</p>	<p>Requirement N2 does not apply to dwellings.</p>

Note: Attention is drawn to the following:

Regulation 3 defines building work. Glazing which is installed in a location where there was none previously as part of the erection, extension or material alteration of a building, other than an exempt building, is building work and is subject to the Requirements of Part N. The installation of replacement windows or glazing (e.g. by way of repair) is not building work but its supply may be subject to consumer protection legislation.

Approved Document B: Fire safety includes guidance on fire-resisting glazing and the reaction of glass to fire.

The Approved Document for Part K: Protection from falling, collision and impact covers glazing which forms part of the protection from falling from one level to another, and which needs to ensure containment as well as limiting the risk of sustaining injury through contact. Recommendations are made for the heights up to which protection from falling should be provided and for means of achieving containment.

Guidance

Performance

Requirement N1

- 0.1 In the Secretary of State's view, Requirement N1 will be met by adopting, in critical locations, measures to limit the risk of sustaining cutting and piercing injuries.
- 0.2 The most likely locations for impacts leading to such injuries are in doors and door side panels and at low level in walls and partitions. In doors and door side panels, the risk is at its greatest between floor and shoulder level, when near to door handles and push plates: especially when normal building movement causes doors to stick. Hands, wrists and arms are particularly vulnerable. An initial impact between waist and shoulder level may be followed by a fall through the glazing, resulting in additional injury to the face and body.
- 0.3 In walls and partitions, away from doors, the risks are predominantly at low level. At that level, children are especially vulnerable.
- 0.4 Glazing in critical locations would be considered reasonably safe were its nature such that, if breakage did occur, any particles would be relatively harmless.
- 0.5 The requirement may also be met if the glazing is sufficiently robust to ensure that the risk of breakage is low, or if steps are taken to limit the risk of contact with the glazing.

Requirement N2

- 0.6 In the Secretary of State's view, Requirement N2 will be met by including, in critical locations, permanent means of indicating the presence of large uninterrupted areas of transparent glazing.
- 0.7 The existence of large uninterrupted areas of transparent glazing represents a significant risk of injury through collision. The risk is at its most severe between areas of a building or its surroundings which are essentially at the same level and where a person might reasonably assume direct access between locations which are separated by glazing.
- 0.8 In such locations, some means should be adopted to make glazing more apparent or visible to people using the building.

Section 1: Protection against impact

Critical locations

- 1.1 The following locations may be considered 'critical' in terms of safety;
- (a) between finished floor level and 800mm above that level in internal and external walls and partitions (see Diagram 1);
 - (b) between finished floor level and 1500mm above that level in a door or in a side panel, close to either edge of the door (see Diagram 1).

Reducing the risks

- 1.2 Glazing in critical locations should either,
- (a) break safely, if it breaks (see paragraph 1.3); or
 - (b) be robust or in small panes (see paragraphs 1.4, 1.5 and 1.6 and Diagrams 2 and 3); or
 - (c) be permanently protected (see paragraphs 1.7 and 1.8 and Diagram 4).

Safe breakage

- 1.3 Safe breakage is defined in BS 6206:1981 Specification for impact performance requirements for flat safety glass and safety plastics for use in buildings: clause 5.3, and is based on an impact test which requires the result of the impact to be limited to creating:
- (a) a small clear opening only, with a limit to the size of the detached particles; or
 - (b) disintegration, with small detached particles; or
 - (c) breakage resulting in separate pieces that are not sharp or pointed.

In terms of safe breakage, a glazing material suitable for installation in a critical location would satisfy the requirements of Class C of BS 6206 or, if it is installed in a door or in a door side panel and has a pane width exceeding 900mm, the requirements of Class B of the same standard.

Robustness

- 1.4 Some glazing materials, such as annealed glass, gain strength through thickness; others such as polycarbonates or glass blocks are inherently strong. Some annealed glass is considered suitable for use in large areas forming fronts to shops, showrooms, offices, factories and public buildings. Reasonable glass thickness/dimension limits for annealed glass which may be used in these locations are shown in Diagram 2 (see also paragraph 2.1).

Diagram 1 Critical locations in internal and external walls

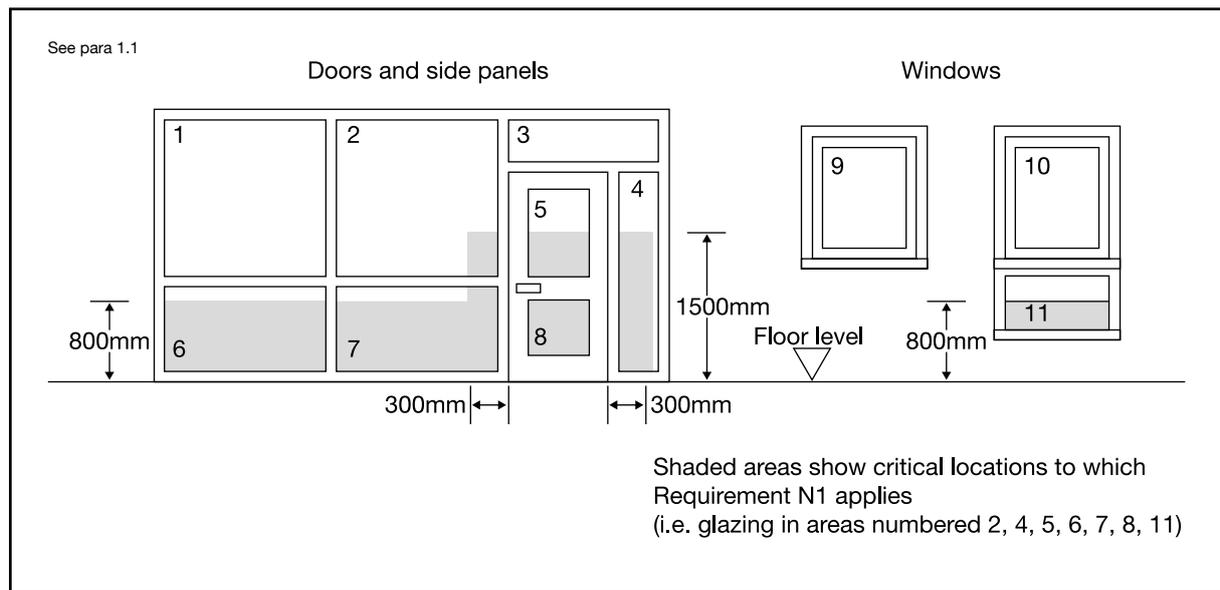

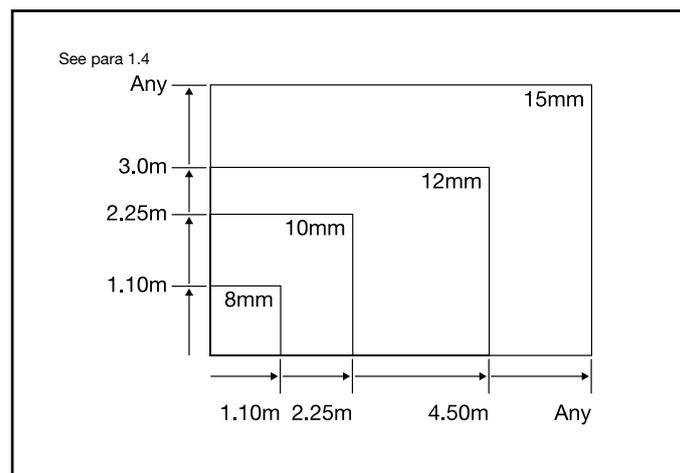

Diagram 2 Annealed glass thickness/ dimension limits

Glazing in small panes

- 1.5 In the context of this Approved Document, a 'small pane' may be an isolated pane, or one of a number of panes contained within glazing bars, traditional leaded lights or copper-lights.
- 1.6 Small panes should have a smaller dimension not exceeding 250mm and an area not exceeding 0.5m² each measured between glazing beads or similar fixings. Annealed glass in a small pane should not be less than 6mm nominal thickness, except in traditional leaded or copper-lights in which 4mm glass would be acceptable, when fire resistance was not a factor. Typical installations are shown in Diagram 3.

Permanent screen protection

- 1.7 If, as part of a design solution, glazing in a critical location is installed behind permanent screen protection, the screen should:
- prevent a sphere of 75mm from coming into contact with the glazing;
 - be robust; and
 - if it is intended to protect glazing that forms part of protection from falling, be difficult to climb.
- 1.8 Glazing in a critical location which is afforded permanent screen protection does not, itself, need to comply with Requirement N1. The principles of screen protection are shown in Diagram 4.

Diagram 3 Dimensions and areas of small panes

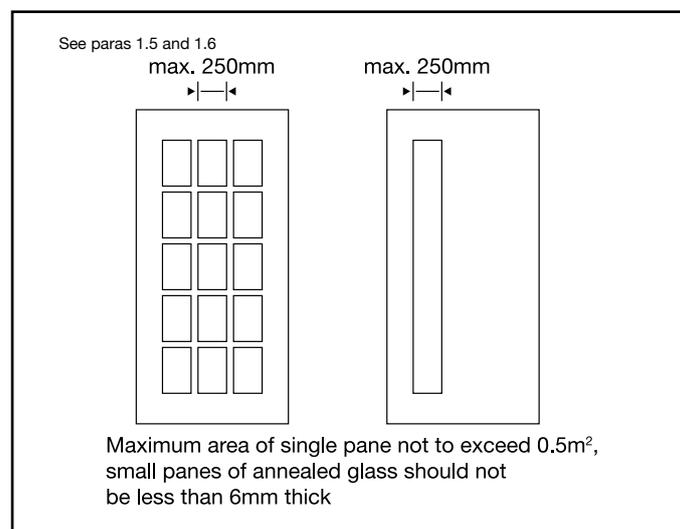

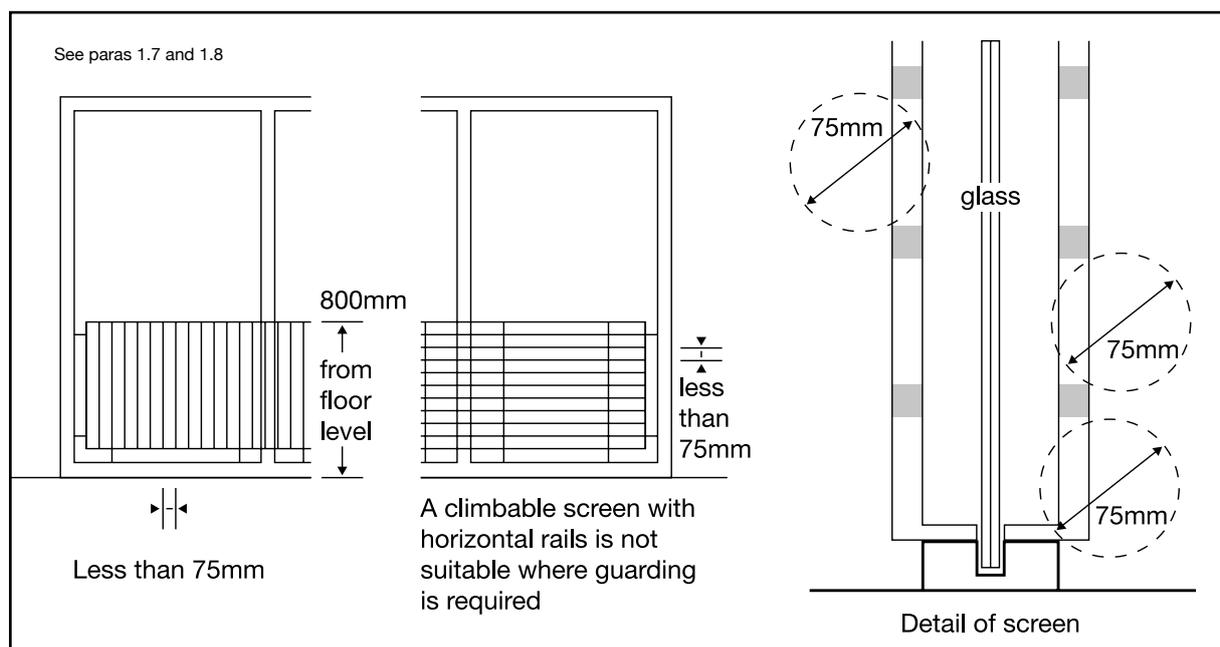

Diagram 4 Permanent screen protection

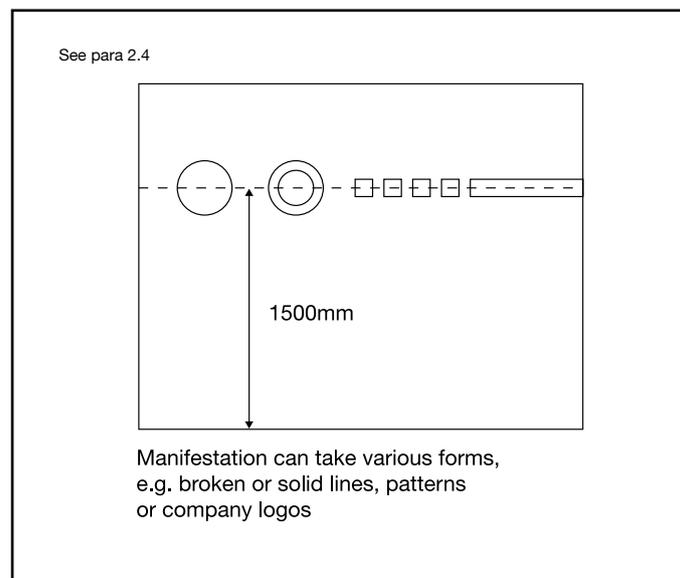

Section 2: Manifestation of glazing

Critical locations

- 2.1 Manifestation of glazing is only necessary in critical locations in which people moving in or about the building might not be aware of the presence of the glazing and may collide with it. ‘Critical locations’ include large uninterrupted areas of transparent glazing which form, or are part of, the internal or external walls and doors of shops, showrooms, offices, factories, public or other non-domestic buildings.
- 2.2 The risk of collision is most severe when two parts of the building, or the building and its immediate surroundings, are essentially at the same level but separated by transparent glazing and a person might reasonably have the impression that they are able to walk from one part to the other without interruption.

Diagram 5 Height of ‘manifestation’ of large areas of transparent glazing

Permanent manifestation of glazing

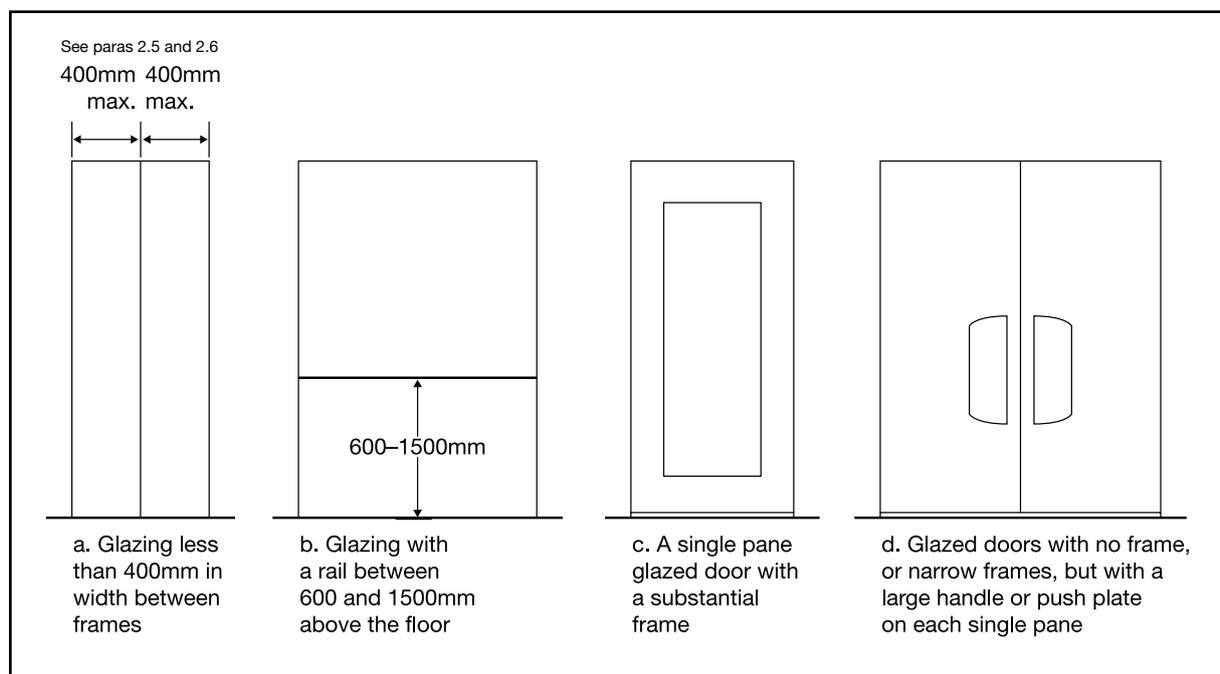

- 2.3 Permanent manifestation of large uninterrupted areas of transparent glazing is only necessary when other means of indicating the presence of the glazing are not used. These other means may include mullions, transoms, door framing or large pull or push handles.
- 2.4 Where ‘manifestation’ is necessary, it may take the form of broken or solid lines, patterns or company logos at appropriate heights and intervals (see Diagram 5).
- 2.5 Diagram 6 includes examples of a number of methods of indicating the presence of glazing.

Alternative indications of glazing

2.6 Examples of installations of glazing which would not normally warrant 'manifestation' include:

- (a) door height transparent glazing less than 400mm in width;
- (b) door height transparent glazing with a rail at a height of between 600mm and 1500mm above finished ground or floor level;
- (c) a single pane glazed door with substantial framing; or
- (d) a single pane glazed door which either is not framed or has very narrow framing, but is provided with large easily seen push or pull plates or handles.

Diagram 6 Examples of door height glazing not warranting 'manifestation'

Safe opening and closing of windows, etc. The Requirements N3

This Approved Document deals with the following Requirement from Part N of Schedule 1 to the Building Regulations 2010.

Requirement	Limits on application
<p>Safe opening and closing of windows, etc.</p> <p>N3. Windows, skylights and ventilators which can be opened by people in or about the building shall be so constructed or equipped that they may be opened, closed or adjusted safely.</p>	<p>Requirement N3 does not apply to dwellings.</p>

Note:

Attention is drawn to the Workplace (Health, Safety and Welfare) Regulations 1992

Compliance with Building Regulation requirement N3 would, in accordance with Section 23(3) of the Health and Safety at Work, etc. Act 1974, prevent the service of an improvement notice with regard to the requirements for opening, closing or adjusting windows, skylights and ventilators in Regulation 15(1) of the Workplace (Health, Safety and Welfare) Regulations 1992.

Guidance

Performance

Requirement N3

In the Secretary of State's view, Requirement N3 will be met if windows, skylights and ventilators which open can be operated safely.

Section 3: Safe opening and closing of windows, etc.

Introduction to provisions

3.1 This Approved Document sets out some ways of complying with the requirement.

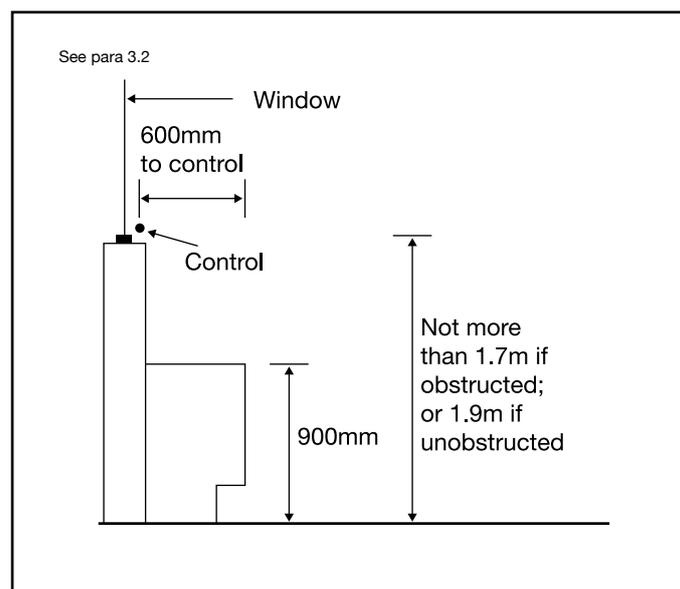

Location of controls

- 3.2 (a) Where controls can be reached without leaning over an obstruction they should not be more than 1.9m above the floor or other permanent stable surface provided to give access. Small recesses, such as window reveals, should be ignored.
- (b) Where there is an obstruction the control should be lower, e.g. not more than 1.7m, where there is a 600mm deep obstruction (including any recess) not more than 900mm high. See Diagram 7.
- (c) Where controls cannot be positioned within safe reach from a permanent stable surface, a safe means of remote operation, such as a manual or electrical system should be provided.

Prevention of falls

3.3 Where there is a danger of the operator or other person falling through a window above ground floor level, suitable opening limiters should be fitted or guarding should be provided (see Approved Document K, Protection from falling, collision and impact). Section 3: Safe opening and closing of windows, etc. N3

Diagram 7 Height of controls

Safe access for cleaning windows etc. The Requirements N4

This Approved Document deals with the following Requirement from Part N of Schedule 1 to the Building Regulations 2010.

Requirement	Limits on application
Safe access for cleaning windows etc.	
N4. Provision shall be made for any windows, skylights, or any transparent or translucent walls, ceilings or roofs to be safely accessible for cleaning.	Requirements N4 does not apply to: (a) dwellings, or (b) any transparent or translucent elements whose surfaces are not intended to be cleaned.

Note:

Attention is drawn to the Workplace (Health, Safety and Welfare) Regulations 1992

Compliance with Building Regulation Requirement N4 would, in accordance with Section 23(3) of the Health and Safety at Work, etc. Act 1974, prevent the service of an improvement notice with regard to the requirements for cleaning windows and skylights, etc. in Regulation 16 of the Workplace (Health, Safety and Welfare) Regulations 1992.

Guidance

Performance

Requirement N4

In the Secretary of State's view, Requirement N4 will be met if provision is made for safe means of access for cleaning both sides of glazed surfaces where there is danger of falling more than two metres.

Section 4: Safe access for cleaning windows, etc.

Introduction to provisions

- 4.1 This Approved Document sets out some ways of complying with the requirement.
- 4.2 Where glazed surfaces cannot be cleaned safely by a person standing on the ground, a floor or other permanent stable surface, the requirement could be satisfied by provisions such as the following:
- (a) Provision of windows of a size and design that allow the outside surface to be cleaned safely from inside the building (see Diagram 8). Windows which reverse for cleaning should be fitted with a mechanism which holds the window in the reversed position. Additional guidance is given in BS 8213-1 Windows, doors and rooflights (Approved Document K contains guidance on minimum sill heights).
 - (b) Provision of an adequate area of firm level surface, in a safe place, to allow use of portable ladders not more than 9m long (measured from the ground to the upper support). Where ladders up to 6m long will be used, normal soil will provide a suitable standing surface (see Diagram 9); where ladders over 6m long will be used, suitable tying or fixing points should be provided (see Diagram 10).
 - (c) Provision of walkways at least 400mm wide, either with guarding at least 1100mm high, or with anchorages for sliding safety harnesses (see Diagram 10).
 - (d) Provision of access equipment such as suspended cradles or travelling ladders, with attachments for safety harnesses.
 - (e) Provision of suitable anchorage points for safety harnesses or abseiling hooks.
 - (f) Only in circumstances where other means cannot be used, space for scaffold towers should be provided, and located so that glazed surfaces can be cleaned.
