

NISCHR Health Fellowships Panel Review

19 December 2013

Minutes:

HF-14-29	This notes that it is a high priority for WG and HDHB but could have provided references. Does refer to R&D Priority sector. No prompt intervention and can't see the methodology working. Over medicalised and case not made as not specific enough. The science is flawed and is not specific about the 'new techniques' being used.	5
