An Overview of Census 2021 Outputs

Helena Rosiecka

Census 2021 Outputs and Dissemination

05 May 2021

A new flexible, timely and accessible approach to Census 2021 outputs

Flexible:

A wider range of outputs to meet the needs of a greater range of users. More control for users to create own outputs.

Timely:

We aim to make outputs available sooner than for the 2011 Census.

Accessible:

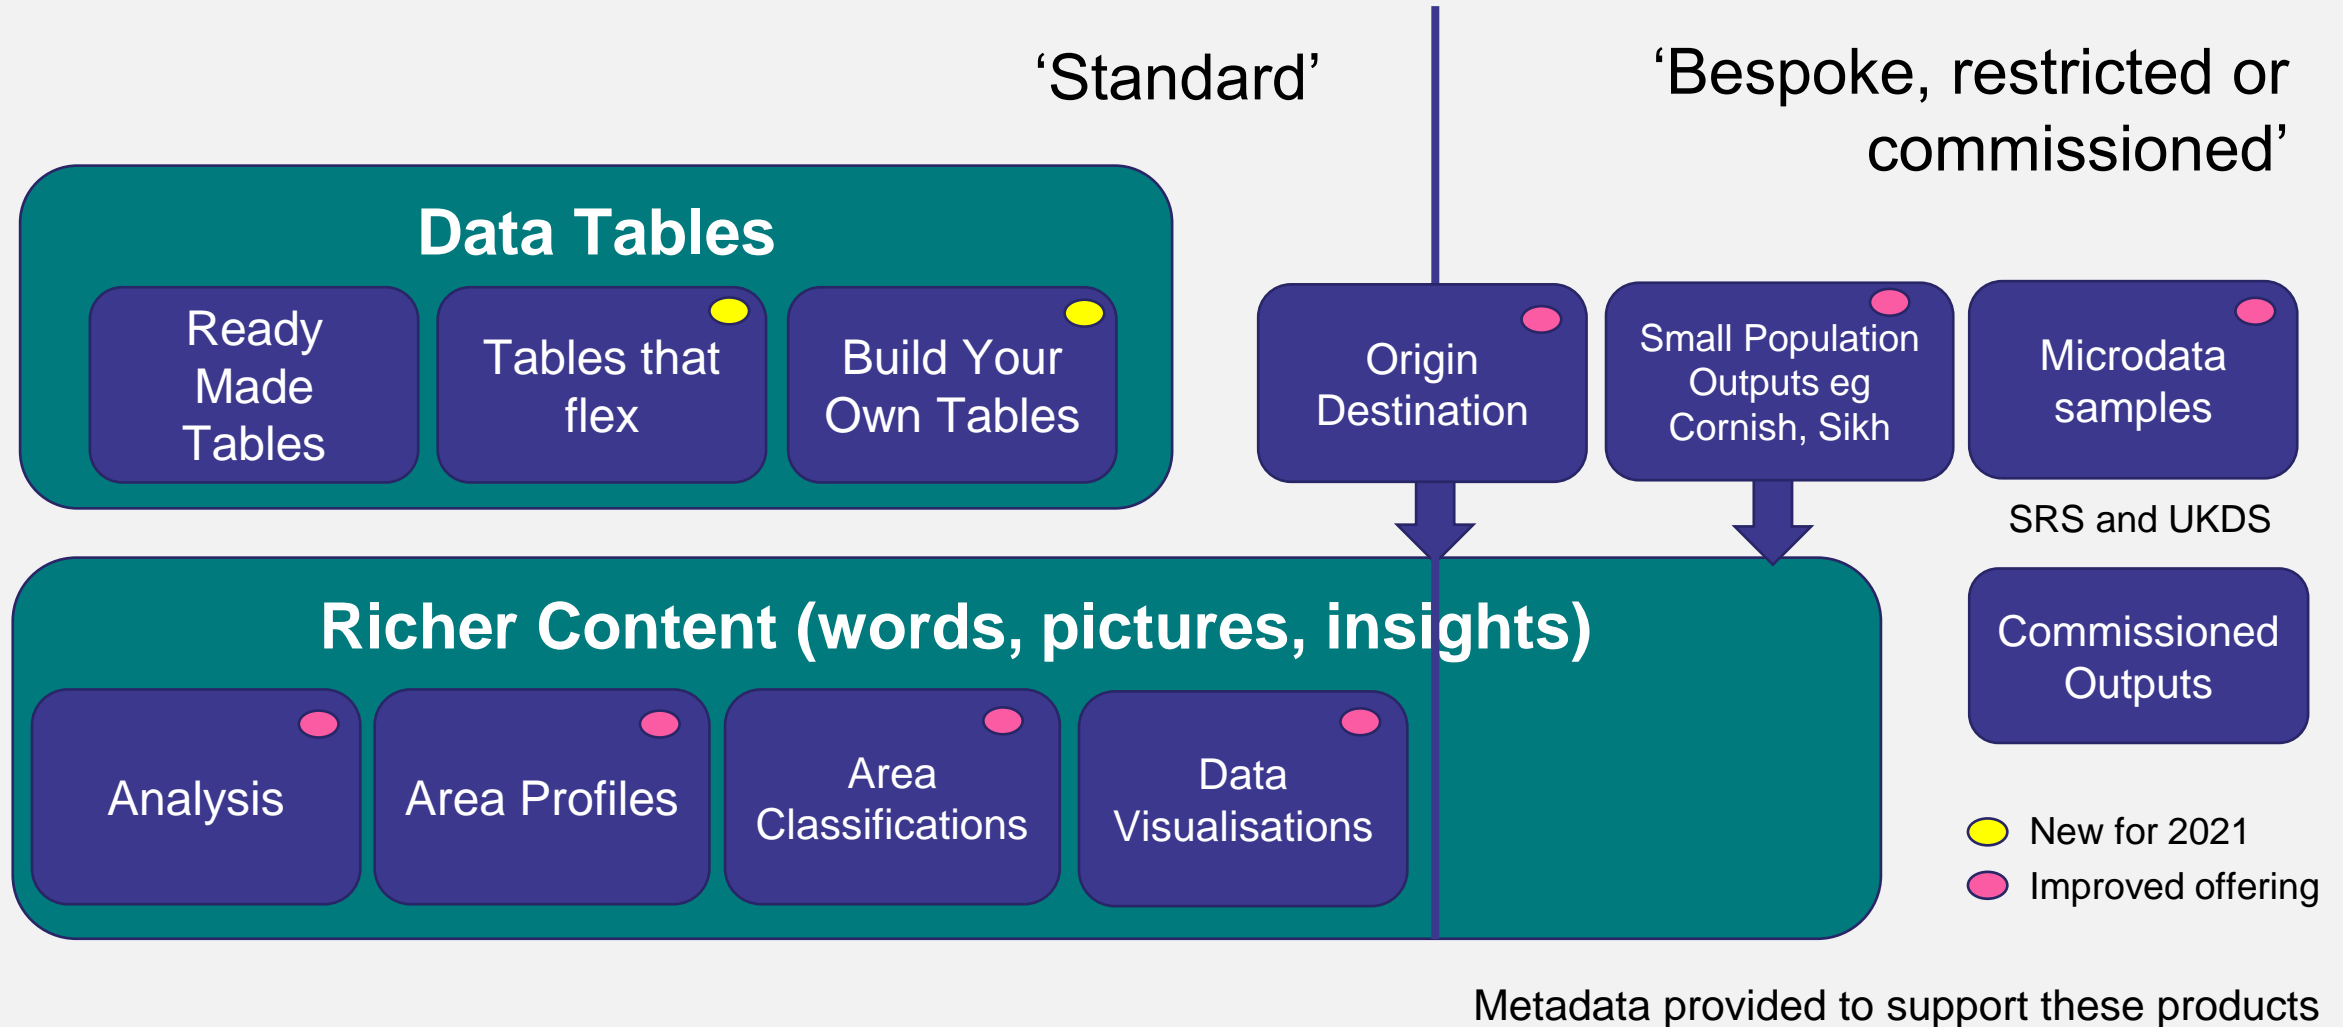

Available in ways that suit users needs, with supporting information to enable understanding of the data.

Comparison of Census outputs release: 2011 & 2021

| Time after Census Day | 2011 Releases | 2021 Plans |
|-----------------------|--|--|
| +1 Year | <i>Census data still being processed</i> | First Outputs, March 2022 |
| +1.5 Years | First Outputs, July 2012 | ⋮ |
| +2 Years | All Quick Statistics, March 2013 | Last Outputs, March 2023 |
| +2.5 Years | All Key Statistics, July 2013 | Main area for improvement compared to 2011 |
| +3 Years | Most standard outputs, May 2014 | |
| +3.5 Years | All Microdata Products, Nov 2014 | |
| +4 Years | Last Outputs, March 2015 | |

Product Overview

Ready made tables

- Traditionally these contain single variable and cross-classifications of multiple variables.
- Planning to make these tables available across all geographic areas a particular level, that meet our disclosure control requirements (i.e. 'blanket' coverage).
- Currently proposing a set based around the Local Characteristic Tables, Key Statistics and Quick Statistics, similar to what was produced in 2011.
- We'll consult on them to agree table specifications.

Build Your Own Tables

- Users to request their own combinations of variables to produce datasets that suit their particular needs.
- The tool builds tables very quickly and applies disclosure control methods and checks automatically.
- Those checks determine the areas that the requested table can be made available for – and tables for a ‘patchwork’ of areas can be produced.

Build Your Own Table Prototype

Find and explore Census data

Explore our Census data by browsing ready-made tables or by creating your own custom table.

[Find ready-made tables](#)

Search and filter our selection of commonly requested tables.

[Create a custom table](#)

Use our flexible table builder to do your own multi-variate analysis.

Choose geographic area

[Population](#) > [England](#) > North East

Merged Local Authority | [Add all](#) | [Remove all](#)

- Hartlepool [Browse 1 sub-area](#) >
- Middlesbrough [Browse 1 sub-area](#) >
- Redcar and Cleveland [Browse 1 sub-area](#) >

Save and continue

Your table

Cell count: 1

Dataset: People with Households: England and Wales

Geographic area: Hartlepool

Geographic level: None selected

Variables: None selected

Choose your variables

- Age of individual ▼
- 2 categories i
- 4 categories i
- 6 categories i
- 8 categories i
- 14 categories i
- 18 categories i
- 21 categories i

Save and continue

Your table

Cell count: 4

Dataset: People with Households: England and Wales

Geographic area: Hartlepool

Geographic level: Local Authority

Variables: Age of individual (4 categories)

Data confidentiality

- Country of birth of household reference person i

- Distance travelled to work >

- Economic activity >

- English proficiency i

- Ethnic group v
 - 3 categories i
 - 6 categories i
 - 8 categories i
 - 19 categories i

Save and continue

Your table

Cell count: 320

Dataset: People with Households: England and Wales

Geographic area: Hartlepool

Geographic level: Local Authority

Variables: Age of individual (4 categories), Country of birth (10 categories), Ethnic group (8 categories)

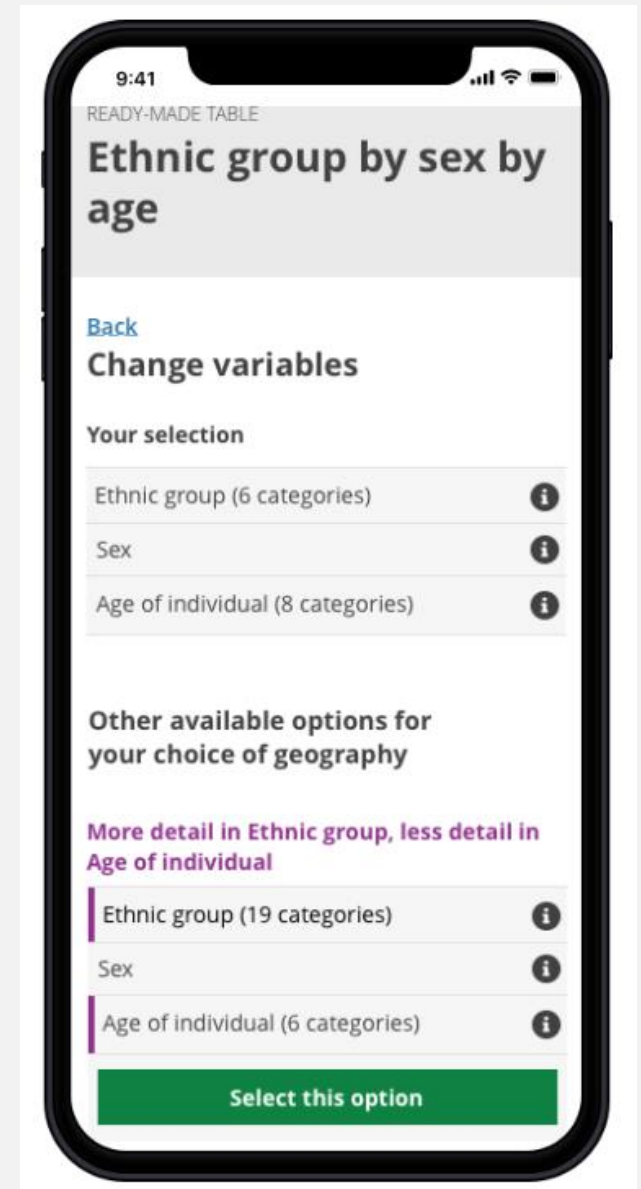

Data confidentiality

100%

1 out of 1 areas pass confidentiality checks.

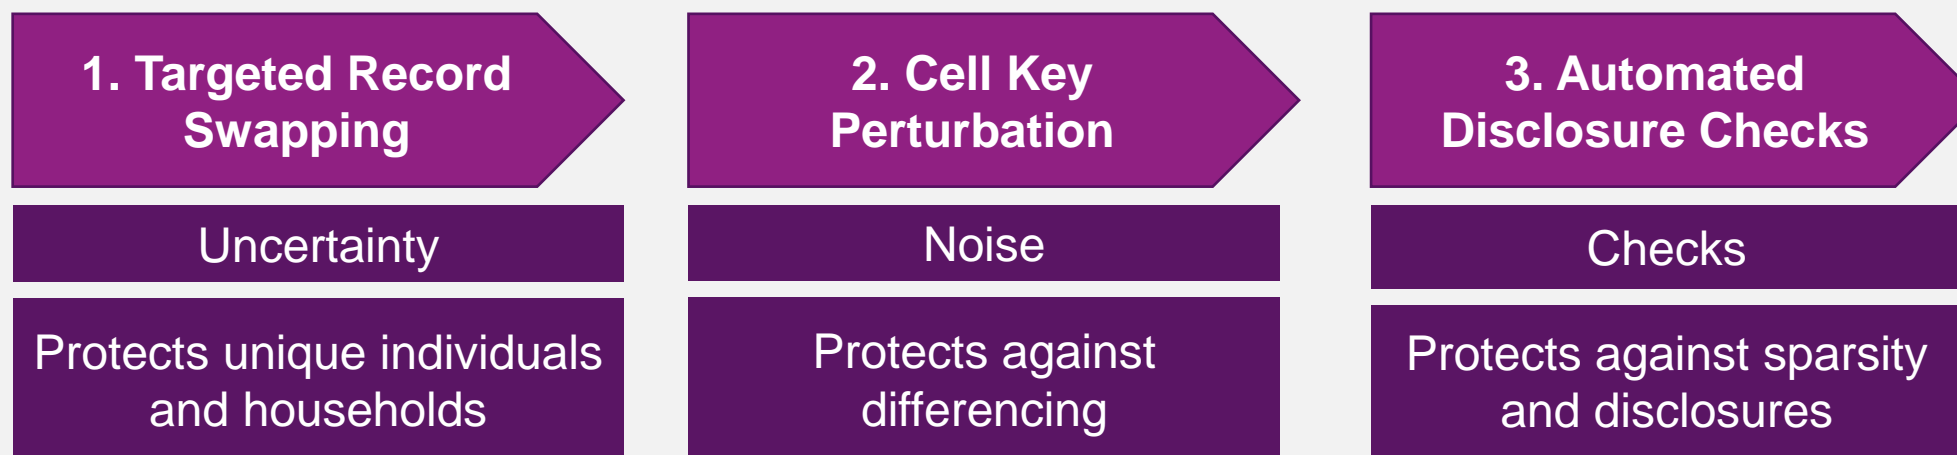

Tables that flex

- This is more conceptual and not yet proven or developed.
- The concept enables users to ‘flex’ a ready-made table (for example to be able to increase the level of detail of a variable in that table).
- We are particularly keen on user feedback on this concept.

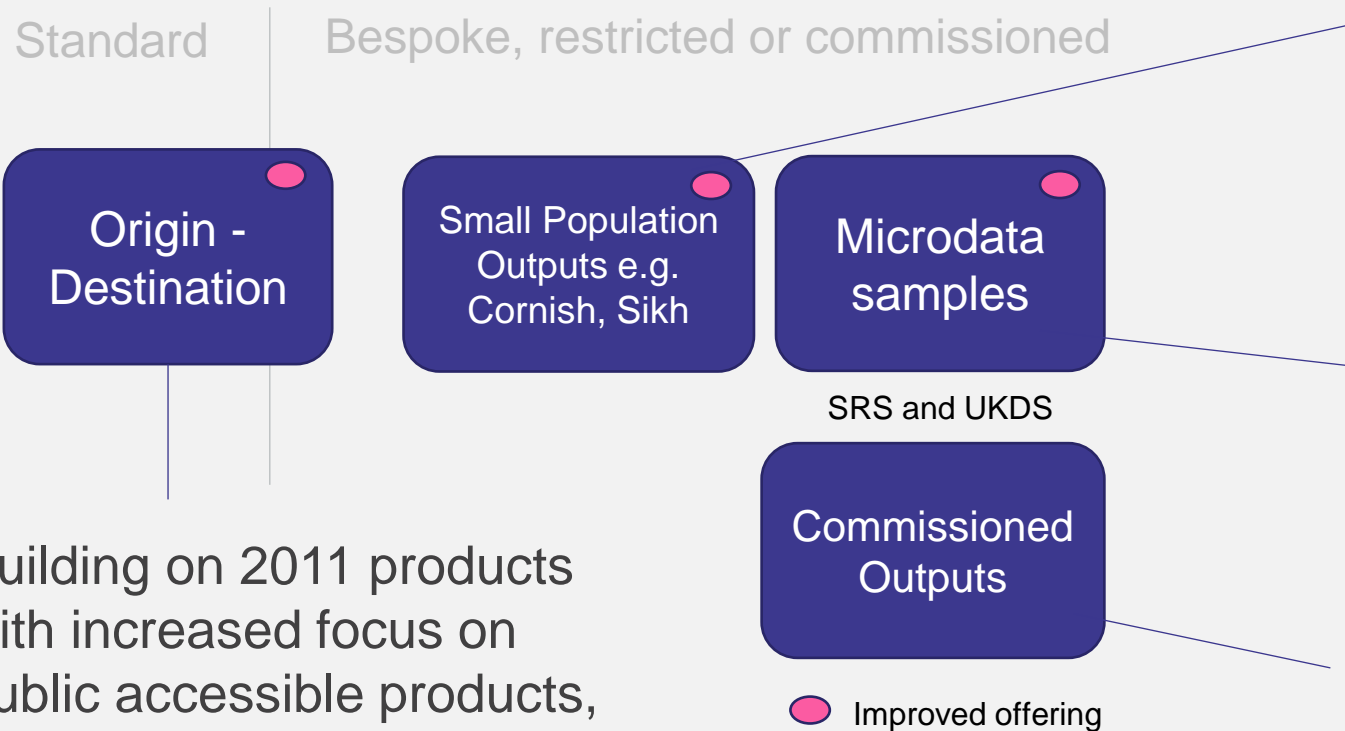

Statistical Disclosure Control

- A multi-layered approach to statistical disclosure control will enable quicker provision of flexible and confidential outputs, using a patchwork approach in areas where the data supports that level of detail.

- The 'cost' is that there are small differences in tables (inconsistent totals).

'Bespoke, restricted or commissioned'

Building on 2011 products with increased focus on public accessible products, as well as the more detailed data tables.

Building on [set of tables produced from the 2011 Census](#) and keen to engage with stakeholders to understand needs and design suitable products.

Plans are similar to 2011 with the addition of a safeguarded household microdata file and provision in IPUMS format.

Continuation of existing service for commissioning of Census outputs not already made publicly available.

Richer content

- Arguably, even more opportunities for providing more value to existing and new users through new and innovative products.
- Exploring changes both in products that could be provided and also how they can be created.

Challenges and opportunities (1)

Likely rate of change in some characteristics from March 2021

- Taking the quality snapshot, and providing to users as data to be used for planning and informing decisions in 2022, 2023 and beyond
- How we provide data to describe change over time, that relates back to and utilises that 2021 Census data – adding more relevant and timely data where required
- The work already underway (2023 recommendation and use of Admin data) gives us some opportunities and possibilities that wouldn't have existed before
- In some areas, it is likely to require other additional data sources to be combined with census data to provide a complete picture (e.g. Travel to Work)
- We'll be sharing thoughts and seeking user views on this as part of the forthcoming Census Outputs Consultation

Challenges and Opportunities (2)

UK data – with Scotland Census moved to 2022

- Timing issue in availability of UK data, but also a question of what is appropriate to draw together from 2 different reference periods (particularly with rate of change expected in some characteristics)
- Impacts to wider UK Population Statistics (particularly around the neatness of updates based on Census information)
- Some UK Outputs are likely to be possible, similar to those produced in 2011, but others (such as UK level Origin-Destination data) are likely to require a re-think about what can be produced to meet users needs
- UK Data User Working Group set up to help us work through the process of determining what outputs can be produced to meet users needs
- Work continues across the 3 Census offices, to harmonise as much as possible

Outputs Consultation

- The Census 2021 Outputs consultation will take place in Spring/Summer
- The scope of the consultation will primarily focus on the new and changing aspects of the Outputs to be made available from the Census.
 - The shape of our outputs and analysis release plans
 - Impact of the Coronavirus for particular outputs
 - Impact of Scotland's Census move on UK data outputs
 - Proposals for new or changed output classifications, small populations and data table descriptions

Key Dates

| Date | Activity |
|----------------------------|--|
| 21 March 2021 | Census day in England and Wales |
| Spring/Summer 2021 | Formal consultation on Census 2021 outputs |
| Autumn/Winter 2021 | Publication of Outputs Prospectus (incl. indicative release timetable) |
| March 2022* | Census First Release |
| March 2022* to March 2023* | Release window of main Census 2021 outputs (England & Wales) |
| March 2023* | Completion of main Census 2021 outputs (England & Wales) |
| End 2023 | Recommendation on the future of the Census and Population Statistics |
| Late 2023/ early 2024 | Release of UK Census outputs |

* Target dates
