October 2021

Appendix 7.3: Phase I Target Notes

Target Notes (TN):

A number of target notes that highlight areas of interest/features that were too small to map were recorded. These are summarised below.

TN1.

190745 201775

Dominant Ash woodland backing onto scrub Salix dominated on Northern edge. Ground flora good, wet in places, bramble and blackthorn shrub dominated in places. Badgers using it, also potential bat roosts in some of the larger Ash trees to the west edge.

TN2.

190850 201784

Potential for Great Crested Newts and water voles.

TN3.

191000 201750

Potential for Great Crested Newts and Water Voles and Otters may feed.

TN4.

191075 201700

Edges very overgrown with brambles and gorse, mainly open water with *Typha lat.* mainly around the edges. Difficult access. Pair of Moorhen. Potential for Great Crested Newts, Water Vole and feeding otter.

TN5.

190950 201770

These small ponds are currently drying out dominated by either or both water horsetail and bulrush. Pond 4 = *Typha* dominated, Pond 2 + 3 = both species. May act as part of a habitat for Great Crested Newts and Water Voles.

TN6.

191328 201400

Small base rich – neutral flush area, very limited bryophyte cover, on slope.
