

Access to the site is detailed in the ES via the B4297 junction from the A483 (T) and we do not see any significant trunk road network issues.

As highway authority for the A483 (T) We would however request a detailed CTMP so that we can review the construction vehicular turning movements along with the delivery and decommissioning methodology

From the details, it appears that the only access for construction use is the B4297 from the A483 (T). Given the presence of a right turning lane and the relatively low number of daily movements we have no concerns regarding the routing. We would like sight of the Chapter 8 compliant route signing schedule for review by SWTRA
